Agenda:

• Demonstrate an understanding of innovative tools used to improve patient safety and support best outcomes.

• Identify the current uses of technology and how technology can impact clinical practices.

• Understand the advantages of using technology in healthcare that provide greater efficiencies in nursing clinical workflows and processes
What our focus in Healthcare?

- Transform nursing practice and care at the bedside
- Provide professional development & education programs
- Focus on quality & patient safety everyday in every way
- Invest in technology and its adoption
- Realize financial and operational efficiencies
Strategy drivers

- Rising chronic conditions and an aging population
- Complexity of care continuum
- Increased “consumerism”
- M&A/restructuring/affiliate complexity
- New market entrants
- New delivery mechanisms (consumer devices, eHealth)

Triple Aim

Cost • Quality • Outcomes

- New reimbursement models
- ACA and CMMS mandates
- Payers shifting costs to patients
- Rising supply costs
- Rising labor costs
- Staffing shortages
Fourth Aim?
Employee Engagement?
Challenges

• Healthcare organizations globally face
  • Escalating costs,
  • Declining reimbursements
  • Stricter government regulations
  • Pressure to improve quality of care, lower costs, and streamline newly consolidated operations
Opportunities

• Leverage technology to:
  • Streamline workflow processes
  • Develop staffing guidelines based on patient needs
  • Automate manual processes
  • Utilize clinical decision support tools to make decisions that impact nursing care, quality and patient outcomes
Staffing Based Acuity

• Patient centered approach to staffing
• Utilizing staffing resources appropriately
• Data to support budgeting and FTE decisions
Nursing Workflows and Processes

- More than the automation of manual processes
- Enhance workflows to increase communication throughout the continuum of care.
- Capturing clinical data
Innovation Drivers

- Nurses are drivers of innovation in healthcare.
- Technology has led to changes in the way patient care is delivered.
- This allows for an increase in the amount of time spent that can be spent on direct patient care.
- Patient centered approach
SAVE THE DATE
